

MAP VIII-9

US Fish and Wildlife Service - National Wetlands Inventory
Town of Newbury, New Hampshire

Selected NWI definitions, from:
<http://www.fws.gov/policy/660fw2.html>

Lacustrine. The Lacustrine System includes wetlands and deepwater habitats with all of the following characteristics: (1) situated in a topographic depression or a dammed river channel; (2) lacking trees, shrubs, persistent emergents, emergent mosses or lichens with greater than 50% areal coverage; and (3) total area exceeds 8 ha (20 acres). Similar wetland and deepwater habitats totalling less than 8 ha are also included in the Lacustrine System if an active wave-formed or bedrock shoreline feature makes up all or part of the boundary, or if the water depth in the deepest part of the basin exceeds 2 m (6.6 feet) at low water. Lacustrine waters may be tidal or nontidal, but ocean-derived salinity is always less than 0.5 parts per thousand.

E. Palustrine. The Palustrine System includes all nontidal wetlands dominated by trees, shrubs, persistent emergents, emergent mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean derived salts is below 0.5 parts per thousand. It also includes wetlands lacking such vegetation, but with all of the following four characteristics: (1) area less than 8 ha (20 acres); (2) active wave-formed or bedrock shoreline features lacking; (3) water depth in the deepest part of basin less than 2 m (6.6 feet) at low water; and (4) salinity due to ocean-derived salts is less than 0.5 parts per thousand.

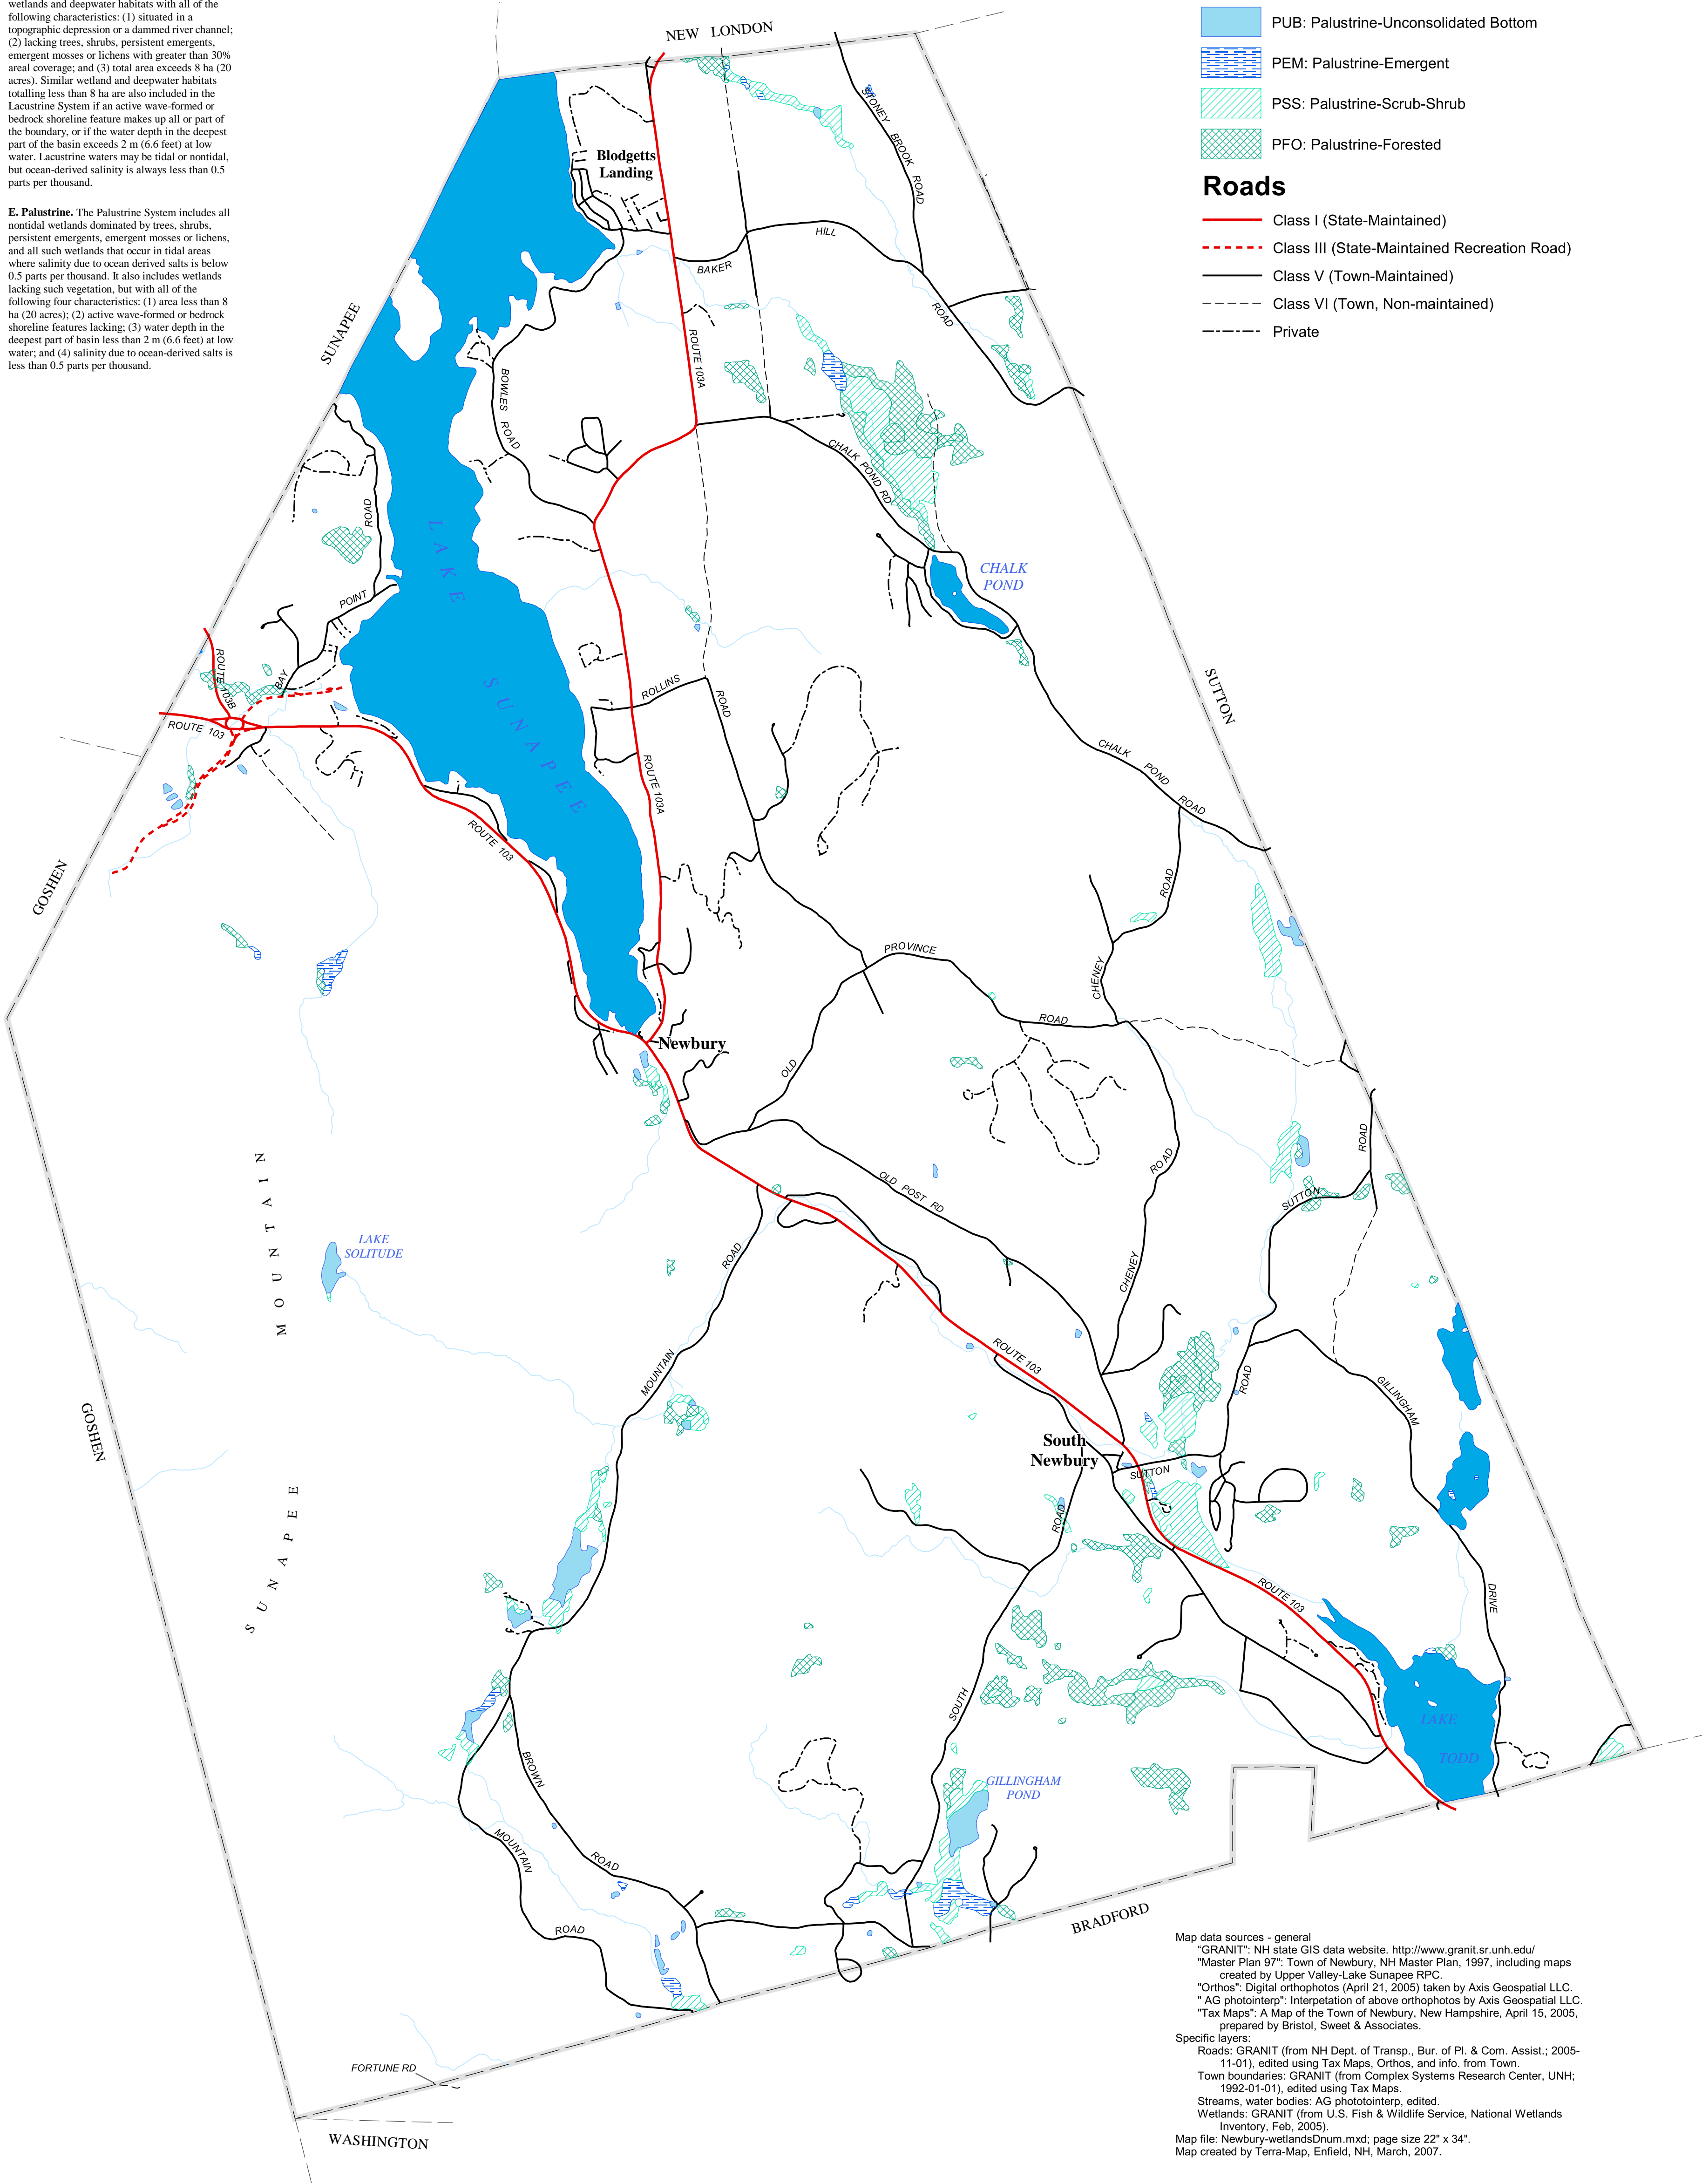

Legend

National Wetlands Inventory Class

- L1U: Lacustrine-Limnetic-Unconsolidated Bottom
- PUB: Palustrine-Unconsolidated Bottom
- PEM: Palustrine-Emergent
- PSS: Palustrine-Scrub-Shrub
- PFO: Palustrine-Forested

Roads

- Class I (State-Maintained)
- Class III (State-Maintained Recreation Road)
- Class V (Town-Maintained)
- Class VI (Town, Non-maintained)
- Private
